Office Action Summary

Art Unit: 3652

1. Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground(s) of rejection.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tateyama et al in view of WO 98/19333, Hansen et al and Miller.

Tateyama et al disclose a substantially similar wafer conveyance system, note Figs. 4-6 for example. ~~Kishimoto et al~~ <sup>Tateyama et al</sup> lack the specific conveyor and position detection for the robot. WO 98/19333 discloses a conveyance system including guide rail #44, robot #41 and linear motor #45, see figure 3.

Hansen et al disclose the use of a position detector #91 (column 17 lines 43+) for the linear motor robot or rail #66. Miller discloses the use of position sensors for the robot on the guide rails (col. 8, lines 10-28). It would have been obvious to a mechanic with ordinary skill in the art at the time the invention was made to provide a position

detection system to the primary reference. The motivation is to control the location of the robot. The use of the specific conveyor is merely the substitution of equivalents.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Bratlie whose telephone number is (703) 308-2669. The examiner can normally be reached on Monday through Thursday from 6:30 to 5:00. Friday is the examiner's day off.
